

Astro 120 ME

Application guidelines

Always read label first (disclaimer) then come here and read the bellow.

It is safe to use across all warm season grasses including buffalo.

Used at a water rate of 2L-5L per 100m².

Chemical rate is 5-20ml/ 100m²

Start at the lower rate of 5ml /100m² for your first application of the year

Applied generally in Nov - March with a foliar Fertiliser such as Largo.

Best applied after a mow in the middle of the day between 8am-3pm. Or sprayed on a sunny day once the dew has burned off.

Must be sprayed with an iron foliar Fert to eliminate the yellowing off effect caused by nitrogen draw down. Largo is a great product to use with it.

Do not spray on days when rain is predicted.

Wear gloves, eye protection, shoes and long pants and shirt.

Dont spray in winds above 15klm/ hour.

Do not re - enter the lawn area until the product has dried on the leaf
